6) Dedic ated towards a cerain App. معنان معانی معمانی معم

1) Reliability & The reliability of a system, R(t), is a function of time, defined as the conditional probability that the system will perform correctly throughout the interval [to, ti], given that The system was performing correctly at time to

To Time To John To Telair white to the Time R(+1) 20.9999 , To Taling Collection repair which the R(+1) 20.9999 , To Taling Collection repair which the R(+1) 20.9999 , To Taling Collection repair which the repa

1

2) Availability & The availability, Alth is a function of time, defined as the Probability that system is oferating correctly and is available to Perform its Function at the instant of time t. | operating refair operating refair * The availability defends not only on how frequent the system becomes in operable. failure repaired and failure repaired but also on how quickly it can be refuired. 3) Main tanina bility & M(t), is the Probability that a failed system will be restored to an Operational state whithin a specified period of time, t. * The restoration process includes & 1) Locating the problem 2) Phy sically relaining the system 3) Bringing the system back to its operational significant. 4) Safety & S(t), is the Probability there a system will either perform its functions correctly, or will dis continue its function in a manner that does not distript the operation of other systems or compromise the safety of any people a associated with the system. -> Safety is a measure of the fail-safe techinques of 5) Security : The Prevention of * Unauthorized access of information and 100 u hendling u n SUPPOrting the authorized access of information. The study of embedded systems is symply a combination of some of the now, The study of embe acree with a pependability avea of study interplay of Pesign objectives # Foult tolerance (Dependability) of redundancy and leads to
Real time

** Foult tolerance (Dependability)

** Fault tolerance requires some types

of redundancy and leads to

energy Consumption. Pesign objectives:

* Cost efficient

19 Pically ES are reactive systems.

A reactive system is continual interaction with its environment and executes at a Pace determined by that environment. "

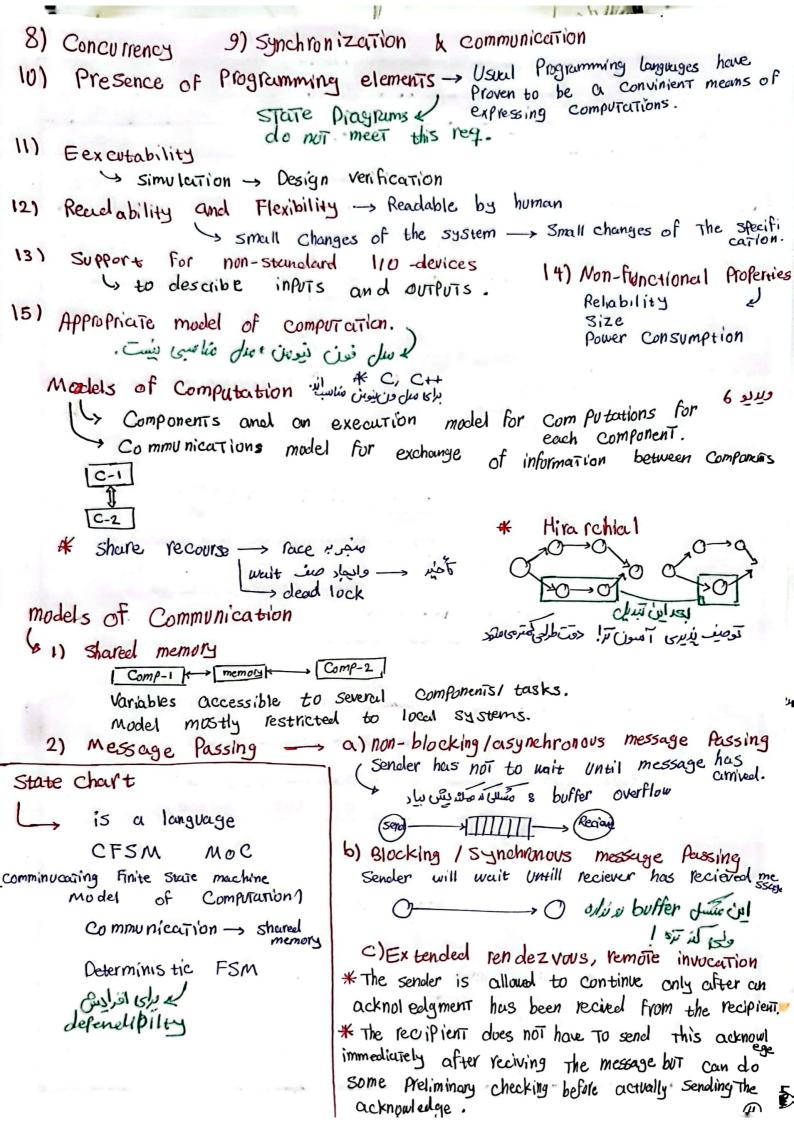

* Reactive Systems = Event - Based Systems

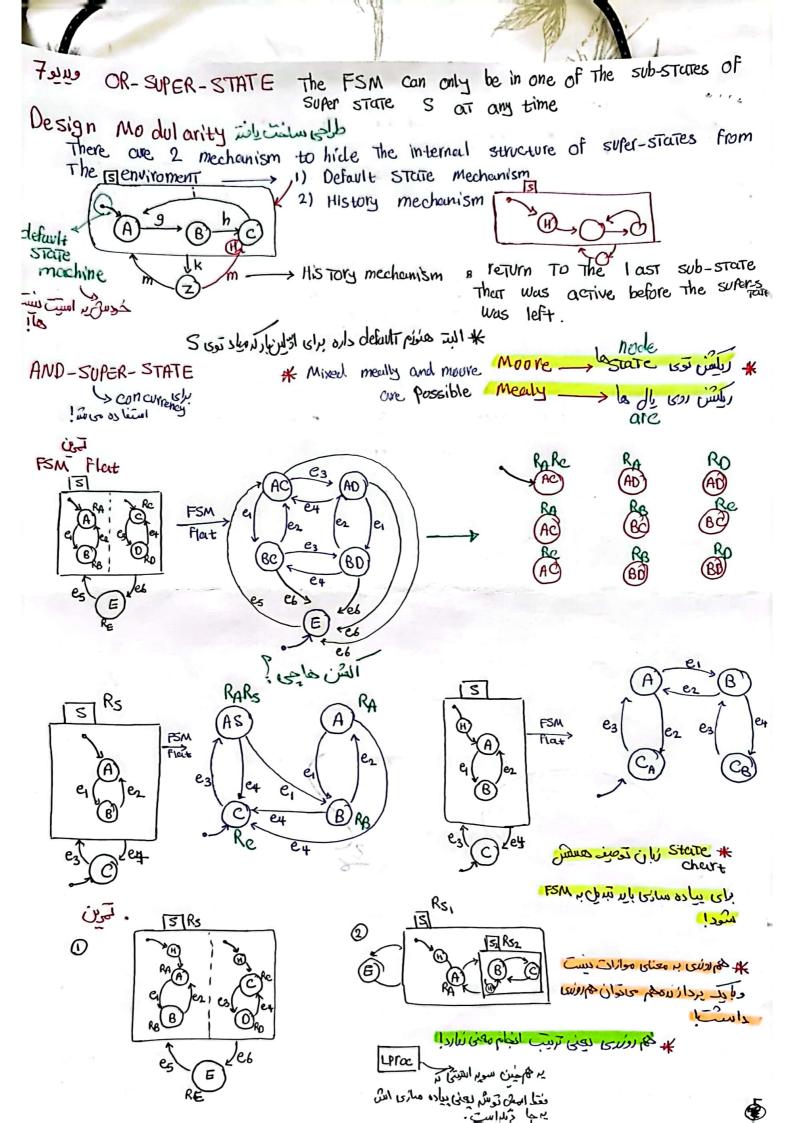

* The Traditional Paradigms of Programming (i.e. model of computable functions) are inappropriate. Von neumann Paradigm Sequential computing

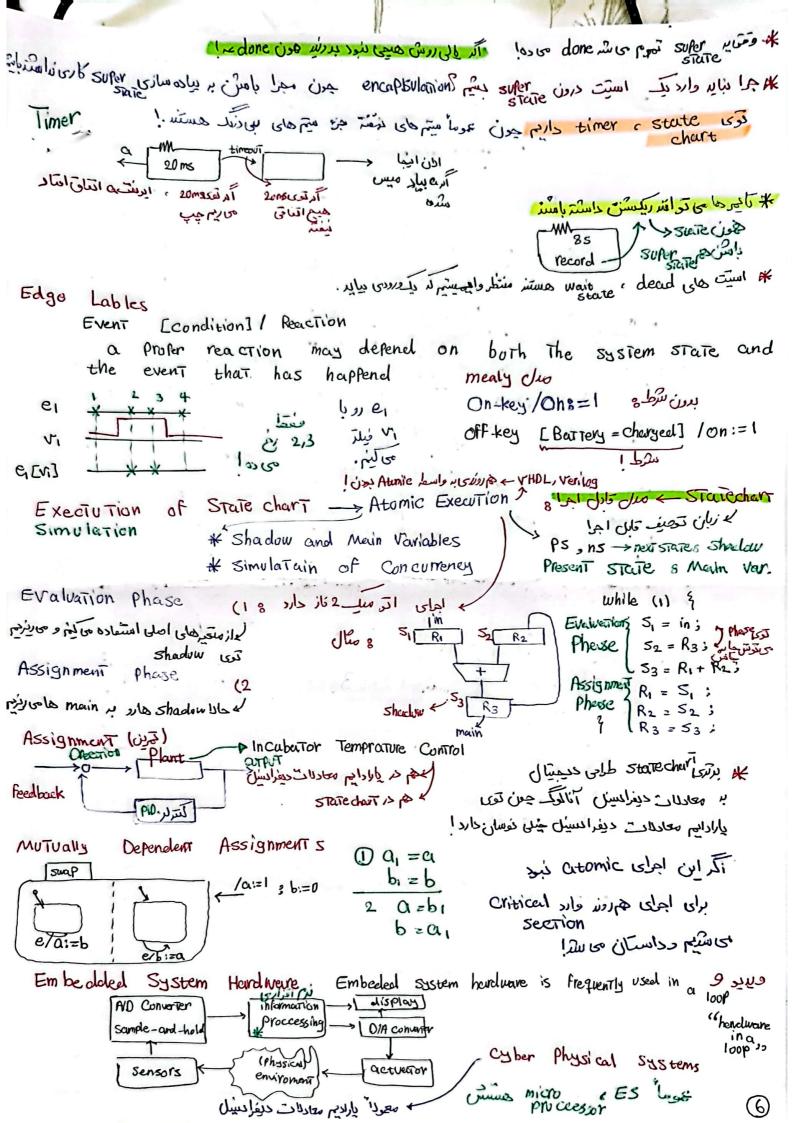

Autometa - based Programming Paradigm + reactive systems.
